WDL Technical Report E112-3

FACILITY REQUIREMENTS AND CRITERIA

Contract Number NAS 9-366

7 September 1962

Submitted to the
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
MANNED SPACECRAFT CENTER
Houston, Texas

Submitted by: R. S. Cronhardt
R. S. Cronhardt, Manager,
Gemini/Apollo GOSS Department

Approved by: O. G. Schwede
O. G. Schwede
NASA/GOSS Program Manager

PHILCO CORPORATION
A Subsidiary of Ford Motor Company
Western Development Laboratories
Palo Alto, California

FOREWORD

The study presently being conducted by Philco WDL under Contract NAS9-366, "Design and Development Study for Manned Space Flight Operations Control and Support," comprises eight major areas, each of which is documented in a separate report. Although some of these areas of study may be further subdivided, they are reported in the same series of documents because of their inter-related nature. The eight report areas are described briefly in the following paragraphs.

1. Facility Requirements and Criteria – TR-E112
   This series of reports will document information pertaining to the overall configuration of the IMCC building, including overall building dimensions, allocation of space for major systems and subsystems, and primary and standby power and air-conditioning estimates for the required equipment.

2. Information Flow Plan (Gemini Rendezvous Operation) – TR-E114
   This series of reports will contain three major elements: (1) information flow requirements (2) information flow plan, and (3) operational concepts and procedures. These elements will be analyzed by mission phase, and by function. Mission phases include checkout, countdown, powered flight, and orbital operations with emphasis on rendezvous, reentry, and recovery. Major functions include flight dynamics, spacecraft systems, life support systems, network control, launch operations, and recovery operations. These reports will also discuss the manning required to perform these functions.

3. IMCC Systems and Performance Requirements – TR-E120
   This series of reports will delineate specifications for the mission control center systems for (1) Gemini rendezvous operations, (2) Manned Apollo earth orbital operations, and (3) Apollo lunar operations. This report series will also present specifications for the Integrated Mission Control Center in

support of all three operations mentioned above. The major systems discussed in these reports include communications, data handling, display/control, and simulation and checkout.

4. Information Flow Plan Development (Manned Apollo Missions)— TR-E121

This series of reports will contain (1) information flow requirements, (2) information flow plan, and (3) operational concepts and procedures for manned Apollo earth orbital and lunar missions. Information will be presented by mission phase and by function. The phases will include checkout, countdown, earth orbit, translunar flight, lunar orbit, lunar operations, trans-earth flight, reentry, and recovery. The functions will be the same as those for the E-114 series. Manning concepts will be discussed as they relate to control and support of these operations.

5. GOSS Performance Requirements – TR-E122

This series of reports will translate the information flow requirements into terms of the performance required of ground equipment to support Gemini rendezvous and manned Apollo missions. These reports will integrate information flow requirements to the end that like requirements for the different missions may be accommodated by the same classes of equipment. Also, the difference between mission requirements (for example, between earth and orbital and lunar missions), the impact on support requirements performance (within phases), and the transition between phases will be adequately taken into account in this series of reports.

6. IMCC Procurement Plan – TR-E125

This series of reports will contain procurement information for typical systems and subsystems which perform the functional operations within the IMCC, and will present scheduling information on long-lead-time items, and items requiring developmental effort. These reports are not intended to be complete procurement documents which, typically, include identification and characteristics of all the components. Rather, the reports

will provide data demonstrating the feasibility of achieving the target dates of the schedule.

7. IMCC Functional Checkout Plan – TR-E126

   This series of reports will contain the general plan for initial checkout of the IMCC systems after installation and prior to accpetance. The reports will also include documentation concerning the scheduling of checkouts (when the facility is in operation), and the intended use of the simulation and checkout system to facilitate this checkout. Personnel and equipment required specifically for systems checkout will be identified as part of the plan.

8. IMCC Functional Maintenance Plan – TR-E127

   This series of reports will discuss the maintenance plan for the IMCC operational systems, excluding facility maintenance. Procedures for preventive and routine maintenance during operation will be discussed, considerations of minimum interference to operations will be delineated, and information concerning logistics, spare parts, personnel, maintenance equipment, and similar items will be included.

This report, WDL-TR-E112-3, presents progress to date on the study area listed in Item 1 above.

CONTENTS

SECTION 1
INTRODUCTION

The Integrated Mission Control Center (IMCC) will house the personnel, equipment, and facilities necessary to exercise operational direction, technical management and operational support for manned space flight programs.

It is the purpose of this document to outline the requirements placed on the structure which houses the Integrated Mission Control Center and to set forth the basic criteria which must be documented to implement the technical equipment and operational areas within the building.

This document represents the third issue of Philco WDL Technical Report E-112. Previous issues [WDL-TR-E112, TR-E112-1 (never published) and TR-E112-2] contained descriptions of IMCC system concepts and functional requirements. These descriptions will be omitted in this and future issues of WDL-TR-E112 and are now included in WDL Technical Reports E114, E120 and E112.

Detailed building criteria previously set forth in WDL-TR-E112-2 are also omitted from this and future issues, and will be included in special reports by the architectural and engineering design group within Philco WDL, which is directly concerned with providing detailed criteria for the architectural and engineering design contractor via the appropriate NASA – MSC and Corps of Engineers channels.

SECTION 2
FACILITY DESCRIPTION

2.1 GENERAL

The Integrated Mission Control Center Facility has been designated Building No. 30 and will be located at the Clear Lake Site of the Manned Spacecraft Center. Building No. 30 will be a three-story structure consisting of a Mission Operations Wing, an Operational Support Wing and an interconnecting Lobby Wing. Building No. 48 is located adjacent to the Mission Operations Wing and will be designed to house electrical and mechanical facilities for the Mission Operations Wing. Figure 2.1-1 represents a site plan showing the approximate location of Buildings Nos. 30 and 48. The Mission Operations Wing will have a total floor area of approximately 113,000 square feet and will contain all technical equipment and facilities, and all operational areas required to support the mission control and monitoring functions of the IMCC.

The Operational Support Wing will have a total floor area of approximately 117,600 square feet and will contain the office, laboratory and technical support functions of the Flight Operations Division.

The Lobby Wing will provide an interconnection between the two main wings and will contain space for a lobby, security control, sleeping facilities and additional offices. This wing will contain a total floor area of approximately 14,000 square feet.

Building No. 48, the Emergency Power Building, will be a single-story structure of approximately 10,500 square feet and will contain all stand-by equipment for power generation, air-conditioning and interim and backup heating facilities for the Mission Operations Wing.

Architectural design of the IMCC Building No. 30 and its component wings, and the Emergency Power Building No. 48 will generally conform to the outline specifications for all structures at the Manned Spacecraft Center.

Figure 2.1-2 is a perspective view showing the general appearance of the Integrated Mission Control Center. Figures 2.1-3, 2.1-4 and 2.1-5 present overall floor plans for Building No. 30.

2.2 MISSION OPERATIONS WING

2.2.1 General

Space Allocation, electrical and mechanical criteria, and supporting criteria for the Mission Operations Wing are based on system analysis, preliminary system design, and equipment assumptions.

The total areas of the Mission Operations Wing is allocated as follows:

Floor	Length	Width	Area (square feet)
1st	224' – 0"	168' – 0"	37,632
2nd	224' – 0"	168' – 0"	37,632
3rd	224' – 0"	168' – 0"	37,632
			112,896

The following facilities are accommodated within this total floor space:

Communication Facilities
Data Processing Facilities
Mission Operation Facilities
Simulation and Checkout Facilities
Support Facilities

Each of these systems and facilities has unique requirements and must be given physical space in the Mission Operations Wing. Figures 2.2.1-1, 2.2.1-2, and 2.2.1-3 present floor plans for the Mission Operations Wing. Further description of operational spaces will be referenced to the preliminary room numbers as assigned on these figures.

In general, the communication and the data processing systems located on the first floor are information handling facilities which support the Mission Operation System. The Mission Operation System encompasses two identical mission control facilities which are located on the second and third floor of the Mission Operations Wing, permitting an operational mission to take place in one facility, while preparation, check-out, or simulation exercises are performed in the other.

Design criteria for the various areas within the Mission Operations Wing are governed by the following:

- Operational requirements
- Equipment quantity, density, weight and dimensions
- Equipment heat release, cooling and personnel comfort
- Cabling methods and requirements
- Special environmental requirements
- Equipment power requirements
- Personnel occupancy

In addition to these explicit requirements, there are certain additional needs which must be considered. These include human engineering and architectural design considerations, personnel traffic, necessary support facilities, and access to equipment and equipment areas for maintenance purposes. For a description of the various system and equipment functions which have led to the basic IMCC facility design, the reader is referred to Report No. WDL-TR-E120, entitled "IMCC System and Performance Requirements and Specifications." The following sections are devoted to descriptions of space allocations, structural, mechanical and electrical requirements, and criteria for the various facilities and functional systems contained in the Mission Operations Wing.

2.2.2 Communication Facilities

All equipment and operational areas for the communication facilities are located on the first floor of the Mission Operations Wing, as shown in Figure 2.2.1-1 in Room Nos. 116, 117, 118, 119, 122, 127, 128 and 130.

Space allocations and structural requirements for these rooms are given in Table 2.2.2-1. Mechanical Criteria are listed in Table 2.2.2-2. Electrical Criteria are ahown in Table 2.2.2-3.

2.2.3 Data Processing Facilities

Equipment and operational facilities for the data processing equipment are located on the first floor of the Mission Operations Wing, as shown in Figure 2.2.1-1, in Room Nos. 110, 111 and 112. Space allocations and structural criteria for these areas are given in Table 2.2.3-1. Mechanical criteria are listed in Table 2.2.3-2. Electrical criteria are shown in Table 2.2.3-3.

Table Nos. 2.2.3-2, and -3 indicate different power requirements and heat release figures for three data processing equipment complements which are discussed in Report No. WDL-TR-E120, "IMCC Systems and Performance Specifications." Section 4.3.5.1 of this report discusses three classes of computer equipment which are capable of satisfying the IMCC data processing requirements. Briefly, the three computer complements are described as:

Complement A – Nine computers of the IBM-7090, UNIVAC 1107 or PHILCO 211 class

Complement B – Five IBM-7094 computers

Complement C – Four CDC-3600 or PHILCO 212 computers

While it is not the purpose of this present report to discuss trade-offs between the three applicable data processing equipment complements described in WDL-TR-E120, it should be pointed out that facility requirements in terms of power and air conditioning load strongly favor the choice of computer complements B or C. While space is provided to house computer complex A in the data processing area, complexes B and C offer savings in space which would be available for system expansion.

2.2.4 Mission Operations Facilities

All equipment and operating areas associated with the mission operations facilities are located on the second and third floor of the Mission Operations Wing with the exception of the television terminal equipment room (Rm. 129) which is located on the first floor. The following list presents the areas allocated to the Mission Operations System:

Room 129 – Closed-circuit television terminal equipment and control room
Room 210 – Network support staff
Room 211 – Operations and procedures
Room 212 – Flight dynamics support area
Room 213 – Spacecraft systems support area
Room 214 – Life support systems and flight test support area
Room 216 – Display terminal equipment
Room 226 – Recovery communications
Room 227 – Recovery control No. 1
Room 228 – MOCR No. 1 conference and ready room
Room 230 – Summary display projection
Room 231 – Mission operations control room (MOCR) No. 1
Room 233 – Visitor's viewing area
Room 310 – Network support staff
Room 311 – Operations and procedures
Room 312 – Flight dynamics support area
Room 313 – Spacecraft systems support area
Room 314 – Life support systems and flight test support area
Room 316 – Display terminal equipment
Room 325 – Recovery communications
Room 326 – MOCR No. 2 conference and ready room
Room 327 – Recovery control No. 2
Room 329 – Summary display projection
Room 330 – Mission operations control room No. 2
Room 332 – Visitor's viewing area

Space allocations and structural criteria for the above rooms are given in Table 2.2.4-1. Mechanical criteria are listed in Table 2.2.4-2. Electrical criteria are shown in Table 2.2.4-3.

2.2.5 Simulation and Checkout Facilities

The primary equipment and operating areas associated with the simulation and checkout facilities are located in four rooms on the second and third floors of the Mission Operations Wing.

The room designations of these areas are listed below:

Room 219 – Simulation Equipment Area No. 1
Room 229 – Simulation Control Area No. 1
Room 324 – Simulation Equipment Area No. 2
Room 328 – Simulation Control Area No. 2

In addition to the above facilities, the simulation and checkout system also utilizes equipment in the data processing facilities, which have been described elsewhere. Tables 2.2.5-1, 2.2.5-2, and 2.2.5-3 list the space allocations and structural criteria, the mechanical criteria and the electrical criteria, respectively.

2.2.6 Operational Instrumentation Facility

An equipment and operational area for the operational instrumentation facility is located on the third floor of the Mission Operations Wing. Room No. 319 serves as a telemetry, tracking, and data equipment area for this facility. Structural, mechanical, and electrical criteria for Room No. 319 are summarized below:

Area	4,950 sq ft
Minimum vertical clearance	14 ft
Permanent equipment Load	2.93 lbs/sq ft
Maximum concentrated load	150 lbs/sq ft
Equipment heat release	442 MBH
Environmental criteria	W-70°F(±) S-75°F(±) 50% RF ±10%

Estimated occupancy	25 people
Equipment electrical load	130 kw, Category B

Since the associated antenna system has not been specified at this time, detailed structural, mechanical, and electrical criteria for the support of this system are not available. These requirements will be included in subsequent issues of this report.

2.2.7 Support Facilities

The equipment and operational areas of the support facilities are located in Room Nos. 114, 115, 220 and 225. Table 2.2.7-1 lists the functions of these rooms. The space allocations and structural, mechanical, and electrical criteria for these rooms are listed in Tables 2.2.7-2, 2.2.7-3, and 2.2.7-4, respectively.

2.2.8 Other Facilities

The remaining area in the Mission Operations Wing has been allocated to elevators, stairways, corridors, toilets, and mechanical equipment space, as shown in the floor plans, Figures 2.2.1-1, 2.2.1-2, 2.2.1-3. Structural, mechanical, and electrical criteria for these areas are to be determined by Architectural and Engineering Contractor.

2.3 OPERATIONAL SUPPORT WING

2.3.1 General

Electrical, mechanical, and structural criteria for the Operational Support Wing are not as specialized as those of the Mission Operations Wing and, consequently, the determination of the majority of this criteria is the responsibility of the cognizant architectural and engineering firm. Only special requirements of the Operational Support Wing are described in this section.

For reasons of simplicity the Operational Support Wing will be assumed to include the Lobby Wing. The total area of the Operational Support Wing may be broken down as follows:

Location	Length	Width	Area (sq ft)
Lobby Wing 1st, 2nd and 3rd floors	84'	56'	4,704
Operational Support Wing 1st, 2nd and 3rd floors	140'	280'	39,200
TOTAL Area (sum of all 3 floors of Lobby and Operational Support Wing)			131,712 sq ft

This area is divided primarily into laboratory and technical support facilities, office and administrative spaces, and miscellaneous facilities. Reference to Figures 2.1-3, 2.1-4, and 2.1-5 will show the proposed locations of these facilities as they are described in this section.

2.3.2 Laboratory and Technical Support Facilities

Generally, the laboratory and technical support facilities are located in the central sections of all three floors of the Operational Support Wing. Table 2.3.2-1 lists the area designations, their space allocations, and other specific architectural criteria. At this time, the only structural criteria imposed is that all areas must be capable of supporting a live load of 125 lbs per sq ft. Table 2.3.2-2 lists the mechanical criteria for these area, and Table 2.3.2-3, the electrical criteria

2.3.3 Office Facilities

Office facilities are located around the perimeter of all three floors of the Operational Support Wing, and the second and third floors of the Lobby Wing. The total space allocation for office facilities is approximately 75,300 sq ft. The structural, mechanical and electrical criteria will be determined by the architectural and engineering contractor, except where such requirements interfere with the operational performance of the building. These requirements will be subject to review and approval by the Flight Operations Division.

2.3.4 Miscellaneous Facilities

The remaining areas in the Operational Support Wing have been allocated to an entrance and security control area, a mission briefing and observation area, mechanical and electrical equipment rooms, washrooms and toilets, and traffic circulation corridors. With the exception of the mission briefing and observation area, requirements for these areas will be determined by the architectural and engineering firm, except where such requirements interfere with the operational performance of the building.

2.3.4.1 Mission Briefing and Observation Facility

The mission briefing and observation facility is located on the first floor of the Operational Support Wing. Its general appearance will be that of a theatre used for mission briefing and observation. The general design must conform to good architectural and engineering practices utilized in theatre design. Specific architectural, structural, mechanical and electrical criteria are listed below:

Space allocation	1,405 sq ft
Projection room height (min)	8 ft
Stage height (min)	12 ft
Screen size (min)	9 ft by 12 ft
Seating capacity (min)	150 persons
Illumination level	Dimmers 0—25 foot-candles
Environment requirement	W - 70°F±, S - 75°F± 50% RH±10%
Power required (projection room)	8 kw — 120/208 volts

2.4 EMERGENCY POWER BUILDING

The Emergency Power Building is designated Building No. 48. The building will be a single-story structure conforming in general appearance to the design criteria used for a small laboratory building at the Manned Spacecraft Center. The building will house the facilities of uninterruptible and standby power generation and the standby air-conditioning

and heating equipment. In addition, space will be provided for shop facilities, control facilities, miscellaneous equipment and an office.

Requirement for this building are summarized below:

Power generation, air-conditioning, and work space	9, 144 sq ft
Shop	352
Office and washroom	352
Control room	368
Battery room	144
	10, 360 sq ft
Length (overall)	140 ft
Width (overall)	74 ft
Height (overall)	26 ft
Minimum clearance	10 ft above tallest generator
Illumination Level Office, Shop & Control	50 ft candles at 30" above floor
Equipment Areas	30 ft candles at 30" above floor
Floor live load (min)	200 lbs/sq ft
Environmental Requirements Office, Shop & Control	W-70°F ±, S-75°F ±, RH 50% ±10%
Equipment Areas	Forced air ventilation
Fuel storage	20, 000 gallons diesel fuel
Access	Large overhead steel doors will be provided for equipment entrance and removal

SECTION 3
TABLES

This section contains summaries of structural, mechanical and electrical criteria in table format. Table numbers are referenced to the appropriate paragraph numbers in Section 2.

List of Tables

Table 2.2.2-1

SPACE ALLOCATIONS AND STRUCTURAL CRITERIA COMMUNICATIONS AREAS

Room No.	Function	Area (sq ft)	Vertical Clearance	Permanent Equipment Load* (lbs/sq ft)	Maximum Concentrated Load** (lbs/sq ft)	Special Structural Requirements	
116	Voice & Intra-Facility Communication Equipment	3380	13'-0"	19.00	150.00	Removable Raised Floor 30" clear under
